The following article describes everything about the most frequenting problem on Xbox 360, the red blinking lights problem. Many a people around the world keep asking the frequent question of How to fix the Red Blinking Lights on my Xbox 360 ? This error has been one of the most common problems with an occurrence rate of 33%. Other common errors are the red ring error, e74, e75 among others. The article guides you through the process of self fixing the Xbox 360 errors. Heat is generated in abundance as a byproduct of the microchips that are placed within a large number of electronic devices. The Xbox 360, being one such user of microchips, has the same problem of overheating, which in turn results in the red blinking lights problem. The reason for this overheating is the design of the Xbox 360, which sports a damped layout without any provision for coolers within the box. As the temperature heats up, the thermal glue that binds the graphics processor within the layout expands and in the passage of time, it results in detaching it. The precautionary functionality of heat sink too gets affected due this increase in heat. As a result of the graphics processor getting detached from its place, there is no way for the Xbox to function as it actually should. The red blinking Lights on your Xbox 360 are an indication of the error that has occurred. The most advisable method to fix your Xbox errors is to follow a self repair process with a little assistance from Xbox repair guides and manuals. The Xbox 360 repair guide, which is priced at \$30 USD, has systemic instructions to repair your Xbox with ease. Following this video guide is more comfortable and profitable than hiring a repairer. It is, at the same time, time-saving. Added to the instruction manual, all you need more is a full set of screwdrivers along with a thin long metal pin like a toothpick to push the release catch. It is thus understood that fixing your Xbox 360 by oneself is easier than wasting loads of money to hire a repairer to repair your broken console. <http://groups.google.com/group/gamersbot/>
