from Low to Medium, High or Very High. Now, I can understand it lagging when I put it on Very High or even High, but on Medium? Come on! Oh, and the resolution is on 800x600x32, my laptop screen's highest resolution is 1280x800. So 800x600x32 should be OK for GTA: SA right? Is there ANY way I can fix the lag? Yes, I have modded drivers.

and dont forget the addgame.reg file on the file section,it help a LOT when it comes to performance. when u install games,try run it then try run it with the game *.exe enabled in the reg tweak. notice a performance boost on most cases but can some times degrade performance and make the texture look very bad (e.g left 4 dead). Happy Gaming buddy^^ On Jul 3, 8:28 pm, Ryan <rwil...@gmail.com> wrote: I'm uing Windows 7 RC right now! graphics driver to the Microsoft Corporation - Prerelease WDDM 1.0 (8.15.10.1749) through Windows Update. I went into Device Manager and went into Display Adapters and clicked on Properties for the 945 and I clicked Update Driver... and I navigated to the driver folder and it says: The best driver software for your device is already installed. And, I can't uninstall the Windows-Update-Installed graphics driver. On Jul 5, 4:19 am, AngelicTears <bd_shin...@yahoo.com> wrote: that's weird, ok2, dont panic Ryan..juz install the driver with update driver in device manager method..click on ur GMA propertise in device manager update driver and choose the inf manually and select the driver, it should be fine.
